H2O

Version 05/2010

Anyone who has ever tried the H2O pedal has loved it. Warm, liquid, and lush are some of the words frequently used to describe this pedal. The new V2 Series H2O gives the same great tone guitarists have come to love over the years, but with all the advantages of V2 construction.

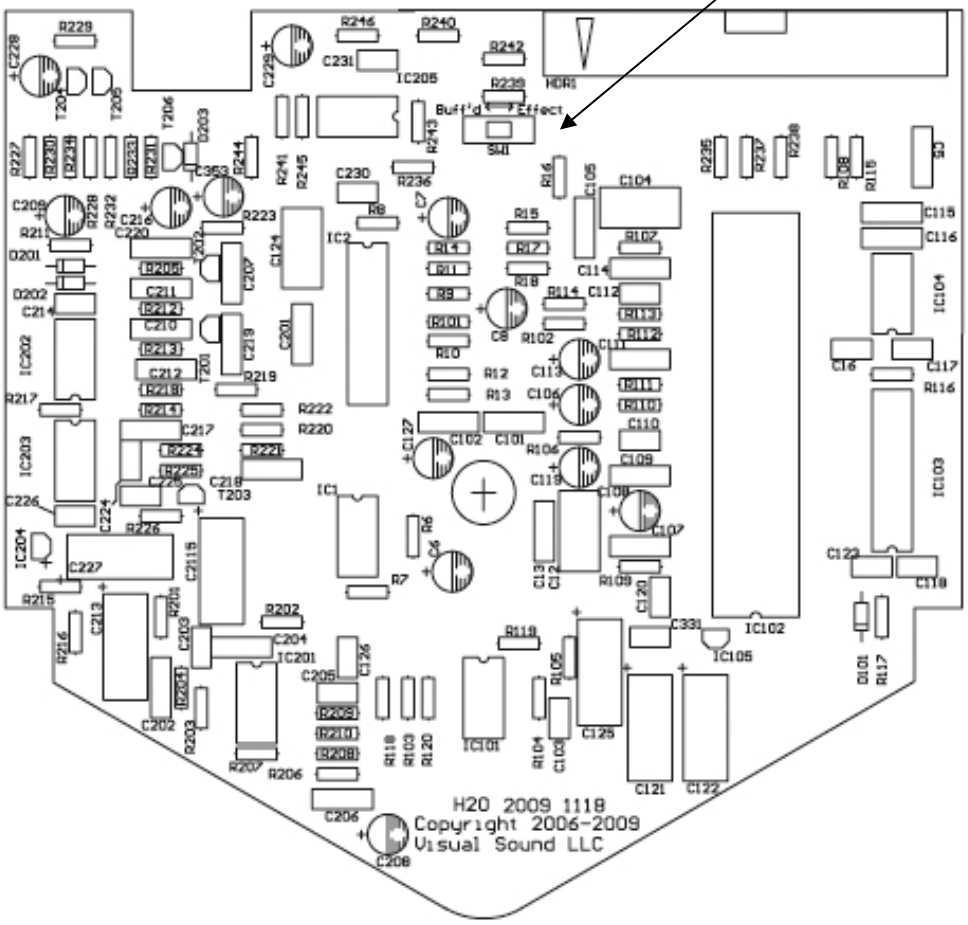
Chorus, Echo, or both… use each channel by itself or combine them just as you would two separate pedals! The Chorus channel is a wonderfully voiced effect for electric, acoustic, or bass guitar, using pure analog circuitry. Use the Norm/Lush switch to set the overall style of Chorus and the user-friendly knobs for the settings. H2O's Echo channel is a warm, analog voiced echo... completely natural sounding. There is even a second (non-effected) output jack for stereo amplifier setups. Following are some settings to get you started:

Echo:

Chorus:

Internal Control:

This mini switch on the circuit board allows you to change the Output 2 jack from un-effected (buffered) to effected output. In the Effect position, H2O has two parallel effected outputs.



Power with either a 9V alkaline battery or 9VDC regulated power supply like the 1 SPOT.
