

TRUETONE Instructions

Truetone Clean Boost is the perfect way to push the front end of your tube amp. Then again, it's also a great way to push a good overdrive pedal a bit harder. If you like the tone you already have from another pedal, just put Truetone after that pedal for a volume boost... great for a solo boost or to make a certain part stand out. Punch in and punch out without affecting your tone. It's your guitar, only more of it.

Here are some examples of how to use Truetone:
