

Route 808

Version 05/2010

One of the great things about the new V2 Series of pedals is that you can now get your favorite Visual Sound effects in single effect pedals... something that has long been requested by musicians. Everyone loves the Visual Sound overdrive in Jekyll & Hyde and Route 66. It is designed to improve on the sound of the TS-808 Tubescreamer, including a bass boost switch and far more output volume than the original. By popular demand, Visual Sound has finally made this great overdrive available in a single pedal.

Following are some settings to get you started:

Power with either a 9V alkaline battery or 9VDC regulated power supply like the 1 SPOT.
