

Double Trouble

Version 05/2010

Everyone loves the Visual Sound overdrive in Jekyll & Hyde and Route 66. It is designed to improve on the sound of the TS-808 Tubescreamer, including a bass boost switch and far more output volume than the original. Over the years, we have had many requests to put two of these overdrives into one pedal, allowing for two different settings and the ability to use them together... like a famous guitarist from Austin used to do. SVR was one of a kind, but you can at least get his tone with Double Trouble! It has all the advantages of V2 construction plus an added noise reduction system.

Following are some settings to get you started:

Single Channel:

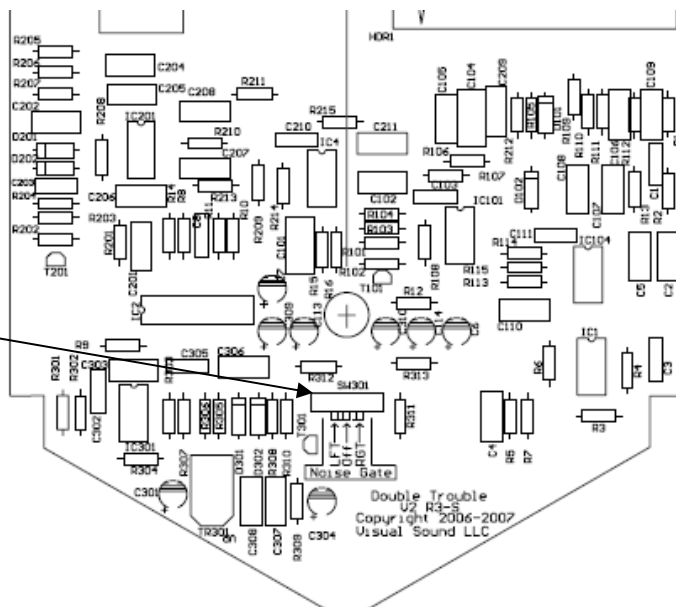

Combined Channels:

Internal Control:

Noise Gate Selector Switch

Power with either a 9V alkaline battery or 9VDC regulated power supply like the 1 SPOT.
